Alerting Abstract WO A1

NOVELTY - A multicompartiment container for sterile carbohydrate medical solutions comprises a sulfite compound in 1 or more of the compartments to stabilize decomposition of carbohydrates or to scavenge decomposition products formed during sterilization and/or storage.

DESCRIPTION - A multicompartiment container for sterile medical solutions, where the solutions are present in 2 or more compartments, and at least 1 of the solutions comprises a carbohydrate compound, and at least 1 sulfite compound is present in 1 or more of the compartments.

INDEPENDENT CLAIMS are included for the following:

- a sterile medical solution comprising a carbohydrate compound and at least 1 sulfite compound selected from HSO_3^- , $\text{S}_2\text{O}_3^{2-}$ and SO_3^{2-} , having a positive counter ion, preferably NaHSO_3 , $\text{Na}_2\text{S}_2\text{O}_5$ and/or Na_2SO_3 , where the sulfite compound is a monosulfite, present at 0.01-10 mM or a disulfite compound at 0.005-5 mM; and
- a method of stabilizing a carbohydrate containing sterile medical solution by adding at least 1 sulfite compound at 0.05-1 (preferably 0.05-0.5) mM for a monosulfite or 0.005-5 (preferably 0.025-0.25) mM for a disulfite compound.

ACTIVITY - Nephrotropic.

MECHANISM OF ACTION - None given in the source material.

USE - For use in treatment of diseases such as uremic kidney disease or kidney malfunctions, including treatment of diseases using peritoneal dialysis. The solution may be used to scavenge toxic or allergenic compounds in vivo, e.g. in body fluids.

Technology Focus

PHARMACEUTICALS - Preferred Container: The multicompartiment container preferably comprises a monosulfite compound at 0.01-10 (preferably 0.05-0.5)mmol per liter of the total amount of solution in the container, or a disulfite compound at 0.005-5 (preferably 0.025-0.25)mmol per liter. The pH of the mixed solution in the container is 5.0-8.0 (preferably 7.0-7.5). The carbohydrate is preferably glucose, present at 4wt.% of the total amount of solution in the container.

The carbohydrate compound is not present in all compartments, preferably in only 1 compartment in a 2 compartment bag, or in only 2 of 3 compartments in a 3 compartment bag. The pH of the solution in the carbohydrate compartment is 2.0-7.5 (preferably 3.2).

After mixing, the final solution has a concentration of monosulfite compound of 0.01-10 (preferably 0.025-0.25) mM, or disulfite compound of 0.005-5 (preferably 0.025-0.25) mM, and comprises 1.5-4

(preferably 1.5, 2.5 or 4)% glucose.
The container may be sterilized using heat treatment.

II. Original Publication Data by Authority

Original Abstracts:

The invention relates to a multiple compartment container for sterile medical solutions, particularly solutions for peritoneal dialysis containing a carbohydrate stabilisation compound, a carbohydrate medical solution containing said carbohydrate stabilisation compound and a method for the preparation thereof.

The invention relates to a multiple compartment container for sterile medical solutions, particularly solutions for peritoneal dialysis containing a carbohydrate stabilisation compound, a carbohydrate medical solution containing said carbohydrate stabilisation compound and a method for the preparation thereof.

The invention relates to a multiple compartment container for sterile medical solutions, particularly solutions for peritoneal dialysis containing a carbohydrate stabilisation compound, a carbohydrate medical solution containing said carbohydrate stabilisation compound and a method for the preparation thereof.

La presente invention concerne un recipient a compartiments multiples destine a des solutions medicales steriles, en particulier a des solutions pour dialyse peritoneale contenant un compose de stabilisation glucidique. Cette invention concerne aussi une solution medicale glucidique contenant ce compose de stabilisation glucidique et une technique de preparation de celle-ci.
